Grown and For Sale by

BLOODGOOD NURSERIES

ESTABLISHED 1790

FLUSHING, L. I., N. Y.

Location 10 miles from New York City. Broadway
Station, North Side Division, Long Island Railroad

Telephone: 424 Flushing

WE ARE PRESENTING a new edition of our catalogue, we tender thanks for past patronage and respectfully solicit its continuance. With confidence in our patrons and ourselves we offer our past record as our promise for the future.

Bloodgood Nurseries, the oldest nurseries in America, have, for the past few years, been under new management and control and these years were the most prosperous in its history. We have, in the period named, moved our office and all our stock to a new location. Recently we have found it necessary, owing to the suburban trend of population, to establish a branch on a tract of land seven miles east of our main office. We are now ready to transact business there as well as at our main nursery.

Our new property lies on the I. U. Willets road, one-half mile west of Albertson Corner, and is accessible by trolley from Flushing and other North Shore points. Those desirous of reaching it by train may do so by going to Mineola and thence by trolley or by train direct to Albertson.

There is not in all America a locality where there exists a more extended native flora than on Long Island, and Flushing, the oldest nursery center in the country, can show in addition a great variety of beautiful introduced trees and shrubs. Here may be seen fine specimens that will show prospective planters what they may reasonably expect for their toil and effort.

In this catalogue we have endeavored to classify and describe what we have to offer in such manner that those desiring aid may be assisted in making judicious selections that will satisfy not the present only, but the future as well.

It is most important that the planning of something so lasting as landscape adornment be done intelligently. A knowledge of the trees used and their ultimate growth is essential to the best success and it is therefore desirable that prospective purchasers see the stock offered.

To all interested we extend a cordial invitation to visit the nurseries at any time.

To reach us from New York City, take the L. I. R. R., North Shore division to Broadway, Flushing. We are only ten miles from the city and ten minutes' walk from the station. In addition there are trolley lines from New York City, Brooklyn and Jamaica, from which point we are easily reached from the South and East of the Island. Visitors by trolley from Jamaica or New York City will get off at 22d St. and Franconia Avenue and go directly east to our office—five cents fare from either place. From New York or Long Island City passengers will transfer to the Jamaica trolley at Flushing Bridge.

Post Office—Flushing, N. Y.

Express—Flushing, N. Y.

Freight—Auburndale, L. I.

Passenger Depot—Broadway, Flushing.

TO OUR CUSTOMERS

PRICES—Quoted are for best commercial grade and quality. **Trees selected by customers at the nursery will be charged for in accordance to their value.** We quote by height but it must be remembered that the height does not always indicate the value of a tree or plant—a very short and compact specimen is more valuable than a slim, straggly one of the same height. Customers can rely upon our selecting full value for the prices charged. We are firm believers in the graded stock system not generally in use in the nursery business. We grade according to height and caliper.

DELIVERY—Free to Freight or Express Stations, or by our own wagons when warranted by distance and nature of order, except in cases of bulky specimen stock or balled Evergreens, when a charge for actual cost of packing or delivery will be made.

TERMS—Customers with whom we have had no dealings heretofore should remit with order, or send satisfactory references. Old and known customers can, if they wish, remit on receipt of goods. All accounts are due, **Net Cash**, as soon as goods are received. Remit by Check, Draft, Express or Money Order, one and two-cent postage stamps accepted for small amounts.

EARLY ORDERS—Customers should send in their orders as early as possible so we can place them on our digging list. Our work in the digging season is necessarily very much crowded owing to our dependence on the weather conditions, and we can only in exceptional instances fill orders in other than regular turn.

DIGGING SEASON—Usually commences end of September in the Fall, continuing so long as ground holds open. In the Spring from the middle of March until middle of May.

GUARANTEE—We guarantee all our stock true to name and in good condition on leaving our hands, but do not guarantee it to live and grow under all conditions, nor do we make up any loss whatever, due to climate effects, or after culture on the part of the purchaser. In case any mistake should happen in the naming of a plant we will replace it with the true variety as ordered, but we are not liable to more than its original invoice value in refunding money.

QUANTITY—One dozen trees or plants of a kind supplied at ten times the single rate. When 100 or more are required of any one sort special rates will be given.

Deciduous Trees

The trees offered in this list have been transplanted several times, are well rooted, of symmetrical shape and of quality described. We care for our trees and destroy annually hundreds that do not measure up to our standard of excellence. Most of our deciduous trees are graded by caliper which is incomparably the best standard for the purchaser. A tree 12 to 15 feet in height may not caliper as much as one 10 to 12 or even less and it is thus unproportioned if it is an inferior tree. We have bought some of these offerings at what seemed an astonishingly low price but always to our sorrow.

We can supply a few shade trees 2½ to 4 inches caliper at special prices.

Hundred rates on application.

Deciduous Shrubs

The Shrubs we offer are of standard commercial grade, young and thrifty. They are not crowded in rows to make them grow tall, but are given space enough for proper development. This insures a bushy and full plant which far more than height ought to be and indeed is the standard of excellence.

S. indicates specimens. Prices on application.

We will sell 100 Shrubs in a good assortment of OUR selecting for \$15.00.

Transplanting Hints

We especially desire to impress upon all interested the importance of using only good soil and using it abundantly in planting all trees.

If the grade is not changed and there exists good natural fertility, no special preparation is required. If the grade is changed we urge the absolute importance of excavating a large area of subsoil and filling in with good top soil. Do this a year in advance if possible, that the soil may become compact. If this cannot be done, firm well the soil as the new hole is filled. Be careful to put fine mold about the roots, but above all be sure it is in close contact. Broken and mutilated roots should be cut off smooth, that they may callus quickly, and from them new roots will issue.

Wet the roots before putting earth on them, that it may adhere closely. Plant in well-drained soil and at about the same depth as the tree or plant stood in the nursery.

We do not approve of indiscriminate and extensive pruning at any period of the tree's life, but if the roots are much shortened some pruning of the top is necessary to maintain a balance. Beech, Oak, Sweet Gum, Mulberry and Tulip trees ought to be shortened in very severely.

Cut to the trunk or a bud always, that you may not later have unsightly and dead spurs on the tree that delay the process of healing.

Mulch the surface after planting with anything that will conserve moisture, and for this purpose leave the surface of the soil loose and porous, applying in addition brush, straw or coarse manure. The latter is best, since by leaching it adds the element of fertility.

Planting Evergreens is more difficult than planting deciduous trees, particularly if large, and extra care must be taken to keep the roots from becoming dry. Chances of success are much greater with small and medium-sized trees, and choice and rare sorts should be moved with a ball of earth attached when possible. The safety of this practice very greatly counterbalances increased cost, and we strongly urge patrons to adopt it.
